The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPL' THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.1 after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a repl - If NO period for reply is specified above, the maximum statutory period of Failure to reply within the set or extended period for reply will, by statute - Any reply received by the Office later than three months after the mailing earned patent term adjustment. See 37 CFR 1.704(b). Status	36(a). In no event, however, may a reply by within the statutory minimum of thirty (30) will apply and will expire SIX (6) MONTHS to cause the application to become ABANDO	e timely filed days will be considered timely. from the mailing date of this communication. DNED (35 U.S.C. § 133).				
1) Responsive to communication(s) filed on 26 L	<u>December 2002</u> .					
2a)☐ This action is FINAL . 2b)⊠ Th	is action is non-final.					
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213. Disposition of Claims						
4) Claim(s) 1-16 and 18-21 is/are pending in the application.						
4a) Of the above claim(s) is/are withdrawn from consideration.						
5) Claim(s) <u>12-16 and 18-21</u> is/are allowed.						
6)⊡ Claim(s) <u>1-10</u> is/are rejected.						
7) Claim(s) 11 is/are objected to.						
8) Claim(s) are subject to restriction and/or election requirement.						
Application Papers						
9) The specification is objected to by the Examiner.						
10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner.						
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).						
11) ☐ The proposed drawing correction filed on is: a) ☐ approved b) ☐ disapproved by the Examiner.						
If approved, corrected drawings are required in reply to this Office action.						
12)☐ The oath or declaration is objected to by the Examiner.						
Priority under 35 U.S.C. §§ 119 and 120						
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).						
a) ☐ All b) ☐ Some * c) ☐ None of:						
1. Certified copies of the priority documents have been received.						
2. Certified copies of the priority documents have been received in Application No						
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. 						
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).						
a) The translation of the foreign language pro	ovisional application has been	received

DETAILED ACTION

Receipt is acknowledged of amendment on 12/26/2002, which has been placed in the file of record.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCabe (US 6,068,192) in view of Neustein (US 5,192,947).

Re claim 1: McCabe shows (column 5, lines 45-50) an electronic card that in addition has multiple electronic stripes. There is an account number (column 4, line 54) on the card. It is clear that if the card is to be used in swipe transactions, as is typical, this number must also be

Application/Control Number: 09/667,039

Art Unit: 2876

stored in the stripe, although it is not explicitly stated. The card is a credit card type (column 5, lines 60-65). Therefore each transaction request must submit data, including the account number, to a money source for approval of the payment card transaction. There is a data packet therefore that includes at least the credit account number.

McCabe fails to show the transmission of either a user id or a data packet that is separate from the credit account number.

Neustein shows (abstract, lines 10-13) an electronic device used in credit card transactions which has a magnetic stripe containing, in addition to ID data, **security data** as well as standard account info for a credit card applicant. The identification and security data are the additional data that McCabe lacks. See Neustein, column 5, lines 10-25 for an additional description of this data.

In view of Neustein's teachings, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the old and well-known security data pack as taught by McCabe in transactions because this provides for a more secure exchange.

Re claim 2: McCabe, as noted above, has a magnetic stripe.

Re claim 3: McCabe has (column 5, lines 48-50) three tracks on his card. Although he does not discuss what data goes on which track, the selection of a particular track does not make a material difference.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over McCabe as modified by Neustein as applied to claim 1 above, in further view of Gutman et al (US 5,834,756, of record in the IDS).

Art Unit: 2876

McCabe as modified by Neustein fails to show that the data pack is generated within the processor and then conveyed to the magnetic stripe.

Gutman (see abstract) teaches having data originate in the processor and then be transferred to a magnetic stripe. The magnetic stripe is thus dynamically dependent on the data in the card.

In view of Gutman's teaching, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the old and well-known origination of a data pack in the processor of a smart card because this could permit the card to act as a multipurpose card, generating several different credit cards data according to different accounts held by the user. Alternatively, this could permit the origination of one-time-use transaction numbers as taught by Eisel (US 4,849,613, of record in IDS). Eisel is discussed below.

5. Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCabe as modified by Neustein and Gutman as applied to claim 4 above, in further view of Lamensdorf (US 5,568,121). The teachings of McCabe as modified by Neustein and Gutman as applied to claim 4 have been discussed above.

McCabe fails to show that the smart card executes a program to check battery life and then generates a warning signal if battery life is low.

Neustein (column 5, lines 59-61) that there is an indicator of a low battery on a card.

Neustein does not show how this is achieved.

Lamensdorf (column, lines 20-28) shows how a low battery is detected: a program monitors power and creates a low battery signal.

In view of the teachings of Neustein and Lamensdorf, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the old and well-known executed of a program to check battery life and then generating a warning signal if battery life is low as taught by Neustein and Lamensdorf into the teachings of McCabe because this can allow the user to replace a card before the power runs out.

6. Claims 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCabe as modified by Neustein as applied to claim 1 above, and further in view of Eisel (US 4,849,613). The teachings of McCabe as modified by Neustein as applied to claim 1 have been discussed above.

Re claims 7-9: McCabe as modified by Neustein fails to teach or suggest the use of a one-time use transaction number transaction number initiated by the user.

Eisel shows (column 2, lines 36-56; especially lines 51-55) the generation of a one-time-use transaction number for financial transactions with the use of a single function key.

In view of Eisel's teachings, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the old and well-known custom-generated transaction number as taught by Eisel in the teachings of McCabe as modified by Neustein because this can be helpful for preventing forgery.

Re claim 10: See Eisel's discussion of sequence numbers (column 5, lines 18-28) which form the basis for how the above one-time-use numbers are generated.

- Application/Control Number: 09/667,039

Art Unit: 2876

Allowable Subject Matter

7. Claim 11 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The examiner did not find within the art, and Eisel does not teach, that the sequence number used for generating the one-time use credit card number originates in a particular security data packet of the type discussed in the earlier claims upon which claim 11 depends.

8. Claims 12-16 and 18-21 are allowed.

The following is an examiner's statement of reasons for allowance:

Re claim 12-16 and 18-21: McCabe shows the following: There is an account number (column 4, line 54) on the card. It is clear that if the card is to be used in swipe transactions, as is typical, this number must also be stored in the stripe, although it is not explicitly stated. The card is a credit card type (column 5, lines 60-65). Therefore each transaction request must submit data, including the account number, to a money source for approval of the payment card transaction, as well as a user account number in an approval process.

McCabe fails to show that the smart card executes a program to check battery life and then generates a warning signal if battery life is low.

Neustein shows (column 5, lines 59-61) that there is an indicator of a low battery on a card. Neustein does not show how this is achieved.

- Application/Control Number: 09/667,039

Art Unit: 2876

Lamensdorf (column, lines 20-28) shows how a low battery is detected: a program monitors power and creates a low battery signal.

In view of the teachings of Neustein and Lamensdorf, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the old and well-known executed of a program to check battery life and then generating a warning signal if battery life is low as taught by Neustein and Lamensdorf into the teachings of McCabe because this can allow the user to replace a card before the power runs out.

However, the second part of step 3, was not found in the prior art of record. The examiner did not find any art showing submitting a low battery signal to a money source in connection with a transaction approval process.

9. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

10. The examiner concedes that the previous rejection falls in view of the co-inventorship indicated by the applicant in the December, 2002 response. New arguments have been made for some of those references, which do not rely on the Wong reference (US 5,956,699).

Page 8

Conclusion

- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel A Hess whose telephone number is (703) 305-3841. The examiner can normally be reached on 8:00 AM 5:00 PM M-F.
- 12. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G Lee can be reached on (703) 305-3503. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7722 for After Final communications.
- 13. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
